## Electronic Locks

- Mechanical parts, electronics and battery are installed inside the door for easy installation, providing the system with maximum security and absolute environmental and weather protection.

- Pure minimalism due to its revolutionary design, fully customizable thanks to the possibility to install any type of handle to suit any style or decor.

- Maximum security with features such as the auto-eject latch, user-programmable electronic privacy, controlled automatic cancellation of lost cards, rounds control function, mechanical emergency lock with master key option, etc.

- NFC enabled. The most secure wireless technology that will lead your hotel to a new dimension.

\* ACTIVA KEY App for automatic guest check-in.

\* ACTIVA KEY TASKS App for monitored tasks in online mode such as initialization of locks, maintenance and audits, battery status check, etc. and to enable or disable access to rooms, offices and common areas.

- Incorporation of 2.4 GHz wireless technology for future OTA system upgrades that will provide online building automation functions.

- Equipped with non-volatile memory able to register events that may include not only openings but also attempts to open, exits, etc.

- Secure management of the installation through server and software allowing full configuration of security levels and user settings, including online revalidation of access permissions.
